SDA Vision / Research report

journal-image.png

Assessment summary

Field	Recorded detail
Finding	Leaning synthetic
Recorded verdict	synthetic likely
Confidence	high
Indicative rating	78/100
Rating basis	median of available model ratings; not a calibrated probability
Explanation	3 models agree this is likely synthetic.
Coverage	image - 1 frame(s) analysed
Review context	Research assessment. Review alongside source information and context. When credentials are missing, origin remains unresolved by this check. Use these findings to inform a documented human review.

Provider overview

Provider	Type / status	Assessment	Rating
Claude Vision	vision / ok	synthetic likely	90/100
OpenAI Vision	vision / ok	synthetic likely	78/100
Gemini Vision	vision / ok	synthetic likely	72/100
C2PA Content Credentials	provenance / ok	inconclusive	n/a
Local forensic cues	forensic / ok	partially synthetic	41/100

Provider evidence / 1

Field	Recorded detail
Provider	Claude Vision
Model	claude-opus-5-5
Status	ok
Assessment	synthetic likely
Confidence	medium
Role in assessment	Supporting
Provider summary	synthetic likelihood 90/100; tells: uniform painterly-photoreal rendering style shared across the main scene and all six portrait tiles, typical of a single image-generation pass, stock-archetype faces with exaggerated, near-identical 'distressed' expressions and similar desaturated grading, over-smooth yet hyper-detailed skin texture (pores and stubble rendered evenly, slightly waxy highlights), syringe and gloved-hand geometry ambiguous: needle entry point and grip read loosely, with fingers merging around the barrel
Evidence 1	Uniform painterly-photoreal rendering style shared across the main scene and all six portrait tiles, typical of a single image-generation pass
Evidence 2	Stock-archetype faces with exaggerated, near-identical 'distressed' expressions and similar desaturated grading
Evidence 3	Over-smooth yet hyper-detailed skin texture (pores and stubble rendered evenly, slightly waxy highlights)
Evidence 4	Syringe and gloved-hand geometry ambiguous: needle entry point and grip read loosely, with fingers merging around the barrel
Evidence 5	Man's hand pinching the sleeve has soft, poorly separated knuckles
Evidence 6	Clean, correctly spelled headline and label typography integrated seamlessly with the artwork, consistent with recent text-capable generators
Evidence 7	Decorative torn-paper edge and grunge textures with a generic, procedurally uniform look
Evidence 8	No camera-consistent noise, lens blur falloff, or compression grain differences between the 'photo' regions
Evidence 9	Square 1254x1254-style canvas with PNG output and no provenance metadata context supplied
Evidence 10	Caveat: The fully synthetic look is strong, but a designed graphic could also combine stock photos with heavy stylisation. Check the file's metadata, C2PA/content credentials and reverse-image matches before attributing origin. The rating does not assess the truth of any health claim.

Provider evidence / 2

Field	Recorded detail
Provider	OpenAI Vision
Model	gpt-6-astra
Status	ok
Assessment	synthetic likely
Confidence	medium
Role in assessment	Supporting
Provider summary	synthetic likelihood 78/100; tells: Main vaccination scene and six inset portraits share unusually uniform cinematic lighting and textured skin rendering., Syringe barrel, plunger, and gloved grip have indistinct, difficult-to-reconcile geometry., Hair and facial creases in several portraits appear unusually densely sharpened against smooth backgrounds., Crisp, coherent typography and neatly aligned panels indicate a designed graphic but do not independently establish AI use.
Evidence 1	Main vaccination scene and six inset portraits share unusually uniform cinematic lighting and textured skin rendering.
Evidence 2	Syringe barrel, plunger, and gloved grip have indistinct, difficult-to-reconcile geometry.
Evidence 3	Hair and facial creases in several portraits appear unusually densely sharpened against smooth backgrounds.
Evidence 4	Crisp, coherent typography and neatly aligned panels indicate a designed graphic but do not independently establish AI use.
Evidence 5	Caveat: A professionally designed collage of stock photographs could produce similar styling; source assets and provenance are needed to distinguish generated portraits from conventional editing.

Provider evidence / 3

Field	Recorded detail
Provider	Gemini Vision
Model	gemini-3.8-flash
Status	ok
Assessment	synthetic likely
Confidence	medium
Role in assessment	Supporting
Provider summary	synthetic likelihood 72/100; tells: model read this as AI editing over a photographic base image, hyper-rendered skin textures, characteristic AI portrait lighting across multiple subjects, slightly unnatural finger and needle interaction
Evidence 1	Model read this as AI editing over a photographic base image
Evidence 2	Hyper-rendered skin textures
Evidence 3	Characteristic AI portrait lighting across multiple subjects
Evidence 4	Slightly unnatural finger and needle interaction
Evidence 5	Stereotyped expressive posing common in text-to-image models
Evidence 6	Caveat: Composite infographic layout uses standard design typography alongside potentially AI-generated stock-style faces.

Content Credentials / provenance

Field	Recorded detail
Provider	C2PA Content Credentials
Model	Not recorded
Status	ok
Assessment	inconclusive
Confidence	Not recorded
Role in assessment	Additional finding
Provider summary	Embedded credentials: none found. Origin remains unresolved by this check.
Evidence 1	Coverage: credentials embedded in the submitted file. External credentials were not retrieved.
Evidence 2	Verifier: c2pa-python 0.37.12; native SDK 0.91.0; specification target 2.4; policy embedded-offline-reviewed-trust-v3.
Evidence 3	Offline embedded-manifest verification; no network trust-list, manifest or revocation refresh.
Evidence 4	No reviewed local C2PA trust snapshot installed. Provenance overrides are disabled.

Provider evidence / 5

Field	Recorded detail
Provider	Local forensic cues
Model	Not recorded
Status	ok
Assessment	partially synthetic
Confidence	low
Role in assessment	Additional finding
Provider summary	Heuristic synthetic likelihood 41/100 from metadata + pixel statistics.
Evidence 1	No camera EXIF (common in AI exports, screenshots, and re-saves).
Evidence 2	ELA mean 1.8, peak 53 (uniform high ELA can indicate generation/heavy edit).
Evidence 3	High-frequency noise std 10.42 (very low/very uniform noise is a synthesis cue).
Evidence 4	Spectral peakiness 24.85 (periodic frequency peaks can mark generated textures).

Evidence supporting this verdict

Field	Recorded detail
Claude Vision	synthetic likelihood 90/100; tells: uniform painterly-photoreal rendering style shared across the main scene and all six portrait tiles, typical of a single image-generation pass, stock-archetype faces with exaggerated, near-identical 'distressed' expressions and similar desaturated grading, over-smooth yet hyper-detailed skin texture (pores and stubble rendered evenly, slightly waxy highlights), syringe and gloved-hand geometry ambiguous: needle entry point and grip read loosely, with fingers merging around the barrel
OpenAI Vision	synthetic likelihood 78/100; tells: Main vaccination scene and six inset portraits share unusually uniform cinematic lighting and textured skin rendering., Syringe barrel, plunger, and gloved grip have indistinct, difficult-to-reconcile geometry., Hair and facial creases in several portraits appear unusually densely sharpened against smooth backgrounds., Crisp, coherent typography and neatly aligned panels indicate a designed graphic but do not independently establish AI use.
Gemini Vision	synthetic likelihood 72/100; tells: model read this as AI editing over a photographic base image, hyper-rendered skin textures, characteristic AI portrait lighting across multiple subjects, slightly unnatural finger and needle interaction

Additional findings

Field	Recorded detail
Local forensic cues	Supporting observation; considered alongside the model assessments.
C2PA Content Credentials	Embedded credentials: none found. Origin remains unresolved by this check.

How this assessment was reached

Field	Recorded detail
1. override	outcome=none; detail=No confirmed C2PA AI assertion or SynthID watermark. Origin remains unresolved by these checks.
2. model_agreement	synthetic=['Claude Vision', 'OpenAI Vision', 'Gemini Vision']; authentic=[]; uncertain=[]; forensic_supports_synthetic=False
3. verdict	value=synthetic_likely; confidence=high; reason=3 models agree this is likely synthetic.

File and analysis record

Field	Recorded detail
File	journal-image.png
Analysis ID	edbcc4b1-e980-4105-87b5-1bcf9bc171af
Generated	2026-09-26T22:31:06+00:00
Tool	SDA Vision 0.1.0
Models	claude-opus-5-5, gemini-3.8-flash, gpt-6-astra
Method version	pdf-preparation-2026-09-26.1
Analysis lens	general
