Provider evidence / 1

Field	Recorded detail
Provider	Claude Vision
Model	claude-opus-5-5
Status	ok
Assessment	synthetic likely
Confidence	medium
Role in assessment	Supporting
Provider summary	synthetic likelihood 88/100; tells: hat merges with head with no visible ears or straps; fold-like ear shapes sit ambiguously under brim, overly smooth, idealized fur rendering with painterly micro-texture on face, whiskers unusually long, dense and uniformly bright, some originating from implausible positions, near-identical glossy eye reflections with slightly irregular pupil shapes
Evidence 1	Hat merges with head with no visible ears or straps; fold-like ear shapes sit ambiguously under brim
Evidence 2	Overly smooth, idealized fur rendering with painterly micro-texture on face
Evidence 3	Whiskers unusually long, dense and uniformly bright, some originating from implausible positions
Evidence 4	Near-identical glossy eye reflections with slightly irregular pupil shapes
Evidence 5	Hyper-stylized golden-hour backlight and creamy bokeh typical of text-to-image 'cinematic portrait' outputs
Evidence 6	Ambiguous dark garment/background mass at lower right with no clear structure
Evidence 7	Hat felt texture and brim edge fibers unusually uniform
Evidence 8	Filename references Firefly and C2PA AI example (contextual, not visual, evidence)
Evidence 9	Caveat: Rating relies partly on aesthetic cues that a staged, retouched pet photo could mimic, and the filename hint is unverified; a human should check the embedded C2PA manifest and file metadata directly rather than trusting the filename.

Provider evidence / 2

Field	Recorded detail
Provider	OpenAI Vision
Model	gpt-6-astra
Status	ok
Assessment	synthetic likely
Confidence	medium
Role in assessment	Supporting
Provider summary	synthetic likelihood 84/100; tells: Chest fur forms unusually broad, layered, feather-like clumps, Cheek fur has a densely etched, repetitive texture, Ear contours merge ambiguously with fur beneath the hat brim, Highly polished eye and nose surfaces contrast with exaggerated fur detail
Evidence 1	Chest fur forms unusually broad, layered, feather-like clumps
Evidence 2	Cheek fur has a densely etched, repetitive texture
Evidence 3	Ear contours merge ambiguously with fur beneath the hat brim
Evidence 4	Highly polished eye and nose surfaces contrast with exaggerated fur detail
Evidence 5	Coherent warm rim lighting and background blur provide some photographic plausibility
Evidence 6	Caveat: Visual styling alone is not decisive; inspect the original file and validate any C2PA credentials rather than relying on the filename.

Provider evidence / 3

Field	Recorded detail
Provider	Gemini Vision
Model	gemini-3.8-flash
Status	ok
Assessment	synthetic likely
Confidence	medium
Role in assessment	Supporting
Provider summary	synthetic likelihood 72/100; tells: overly uniform airbrushed fur rendering, implausible ear integration under hat, perfect studio lighting and stylized depth of field blur
Evidence 1	Overly uniform airbrushed fur rendering
Evidence 2	Implausible ear integration under hat
Evidence 3	Perfect studio lighting and stylized depth of field blur
Evidence 4	Caveat: High-quality digital rendering or retouching on real reference photos can mimic full synthesis.

Provider evidence / 5

Field	Recorded detail
Provider	Local forensic cues
Model	Not recorded
Status	ok
Assessment	partially synthetic
Confidence	low
Role in assessment	Additional finding
Provider summary	Heuristic synthetic likelihood 47/100 from metadata + pixel statistics.
Evidence 1	No camera EXIF (common in AI exports, screenshots, and re-saves).
Evidence 2	ELA mean 1.0, peak 26 (uniform high ELA can indicate generation/heavy edit).
Evidence 3	High-frequency noise std 3.58 (very low/very uniform noise is a synthesis cue).
Evidence 4	Spectral peakiness 32.99 (periodic frequency peaks can mark generated textures).
